## **ABSTRACT**

The main aim of this project is to develop a system which helps to manage all the invention information that exists in the world wise with the details of inventors, jury who awarded them etc. managing efficiently with convenience. We will develop a complete Java Application with front end and backend. Any user can access the system to view the data by logging in with the valid credentials. Person can also register to the system if he is a new user. If the login credentials are invalid then, an error message will be displayed on the screen accordingly. User can be just a viewer or a one person who can insert the details of the invention (basically an inventor). Inventions can also receive the nominations from the user (only the viewer). It is not mandatory that every inventor should receive the award. Secondary actor Admin updates all the information made by the users. Awards are given by nominations to inventor's inventions for which the jury's decision is final. Jury can login to the system with the valid credentials and can give verdict for the invention based on the nominations. If the jury login credentials are invalid, then error message will be displayed on the screen. On the other hand, database stores the invention details like invention, inventors(s), category (like science, engineering etc), the year of invention, the story behind, awards/recognitions received, the year in which that was received etc. The inventor details include name, country, and job type. The list of jury members, details of nominations, awards can also be maintained in database.

## **Functional Requirements of System**

1. User, Jury needs to register with system before using the application.
2. User login to the system to access the corresponding page. User can be a viewer or an inventor.
3. User can view the details of the invention and can nominate inventor for invention.
4. User will be redirected to his corresponding page on clicking Add\_Invention and inserts the details of invention.
5. Jury can give verdict for the invention based on the nominations.
6. Admin will update the data accordingly.

## **Use cases**

1. Sign up
2. Login
3. Invention details
4. Nomination for invention
5. Verdict for invention
6. Awards achieved
7. Update Info

## **Actors and their functionalities:**

### **1. User:**

- User needs to register with system and login with the valid credentials. He can nominate for the invention and can view the details of the invention.
- User can also insert details of the invention

### **2. Jury**

- Jury registers and login to the system and can give verdict for the invention based on the nominations.

### **3. Admin**

- Admin updates the info of the user, inventor, and jury.

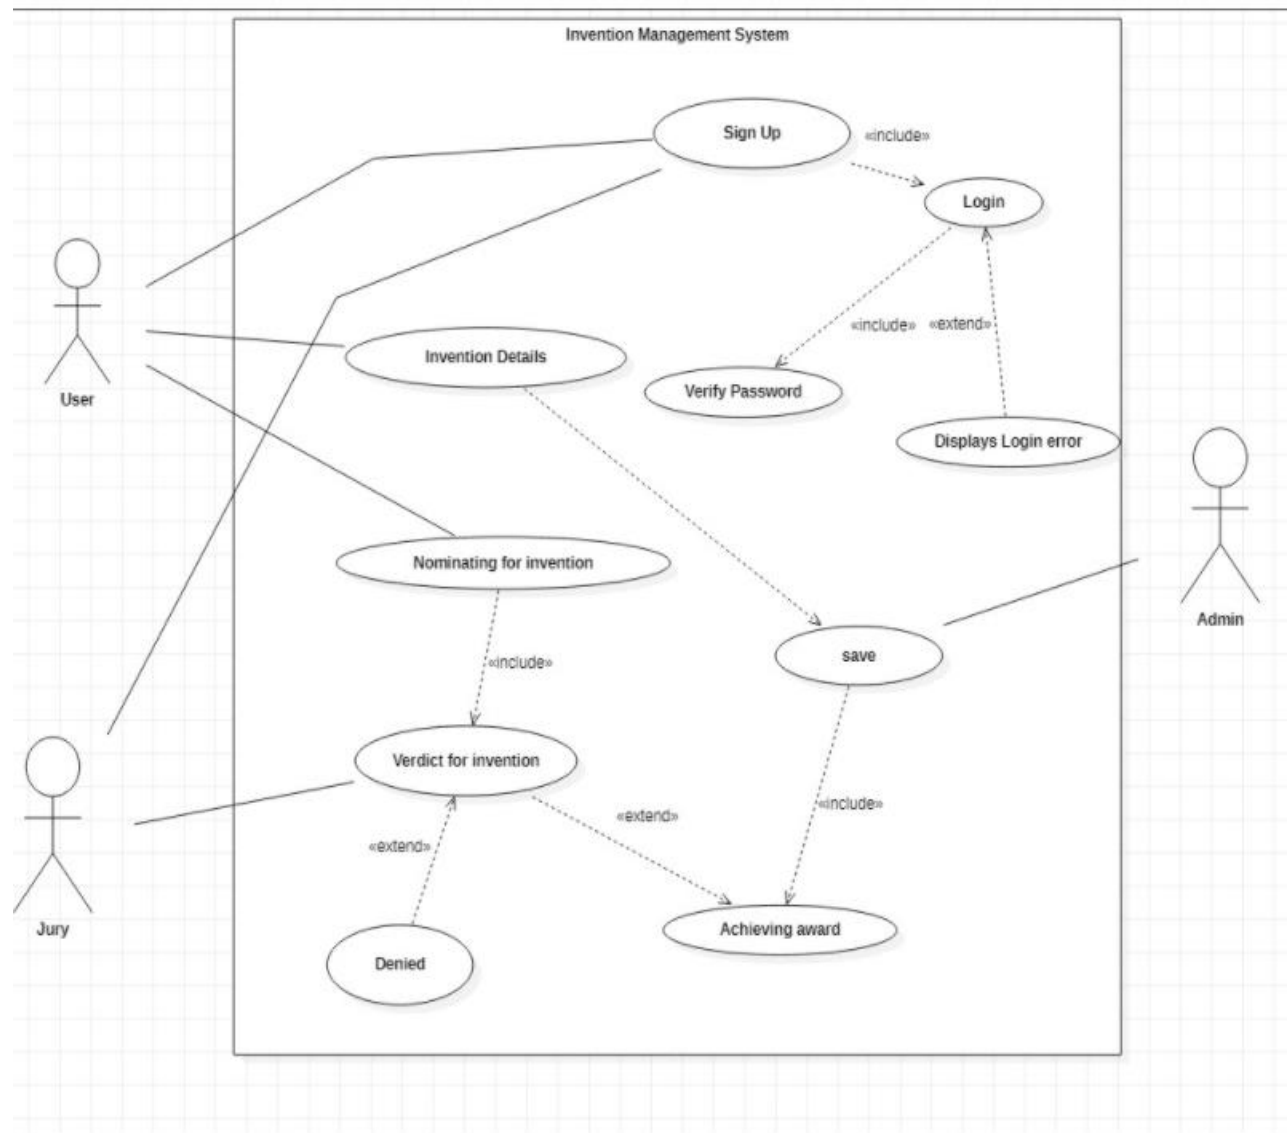

## **Use case Description**

Use case ID	Login
Brief description	The user can access to the system using username and password
Primary actors	User, Jury
Precondition	Users, jury must register first to the system and should have a valid login credentials.
Post condition	If not registered the user, jury must register first and can perform their actions.
Main success Scenario	If credentials are valid then users and jury are directed to their corresponding page where they can perform their actions.

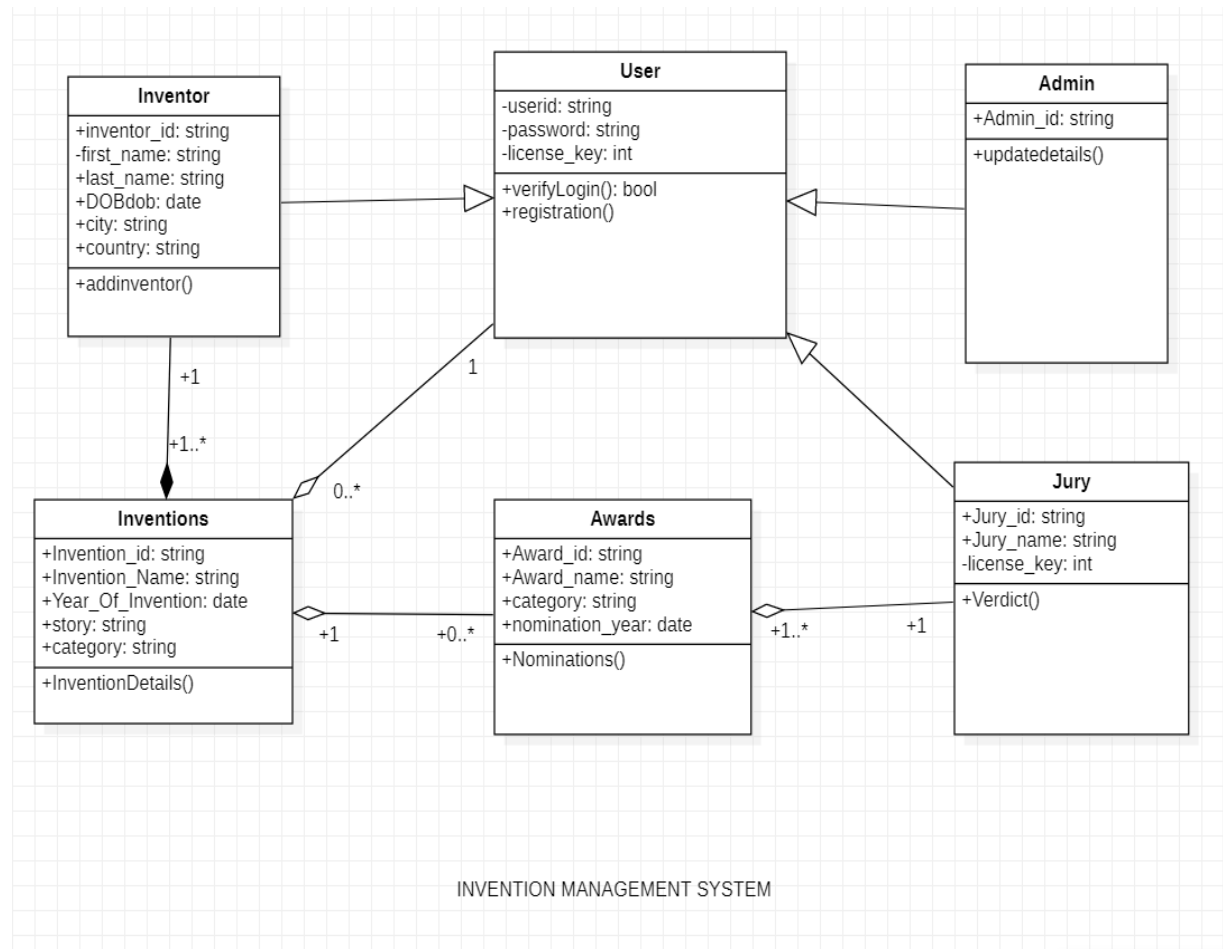

Actor Action	System response
1. The user enters valid login credentials and clicks on login button	2. Performs validation of login credentials. If valid user, provides access to their pages.
3. The user (viewer) gets access to the page and clicks on invention button.	4. Presents the details of inventions.
5. If user (viewer) clicks on Nomination button (not mandatory)	6. Presents the details of invention to nominate.
7. The user (new inventor) can get access to the page he can request for entry of his invention.	8. Presents the form to be filled for invention entries.
Alternate flow	
	2a. If not a valid user, system returns error message.

Actor action	System response
1. Jury enters valid login credentials and clicks on login button	2. Performs validation of login credentials. If valid user, provides access to their pages.
3. Jury clicks jury panel button.	4. Presents the awards details and requests to finalize the award to new invention.
5. Jury approves the invention	6. Presents the details to which the award is granted.
Alternate flow	
	2a. If not a valid jury, system returns error message.

## Use case Diagram

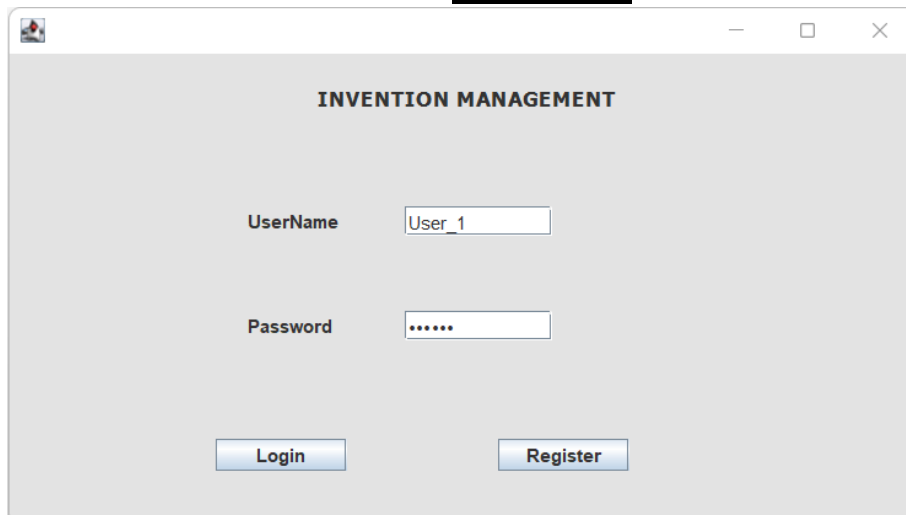

## Class Diagram:

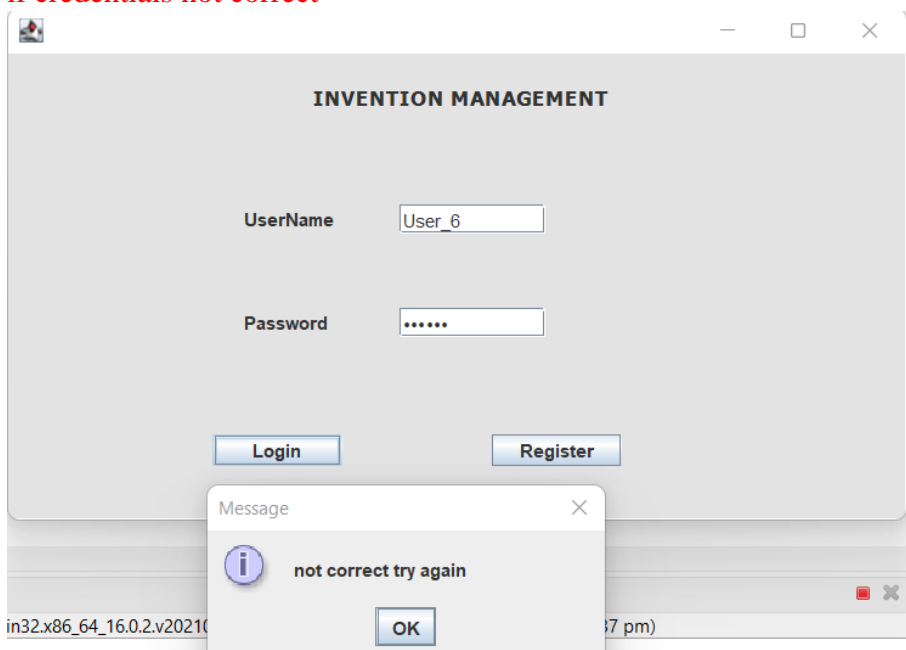

## User Interface design

### Login Page

A screenshot of a web application window titled "INVENTION MANAGEMENT". The window has a light gray background and a standard Windows-style title bar with minimize, maximize, and close buttons. The main content area contains two input fields: "UserName" with the text "User\_1" and "Password" with masked characters ".....". Below the input fields are two buttons: "Login" and "Register".

if credentials not correct

A screenshot of the same "INVENTION MANAGEMENT" window, but with a message dialog box overlaid. The dialog box is titled "Message" and contains an information icon (i) and the text "not correct try again". Below the text is an "OK" button. The background window shows the "UserName" field with "User\_6" and the "Password" field with masked characters ".....". The "Login" and "Register" buttons are still visible.

## Registration Form

If password doesn't match

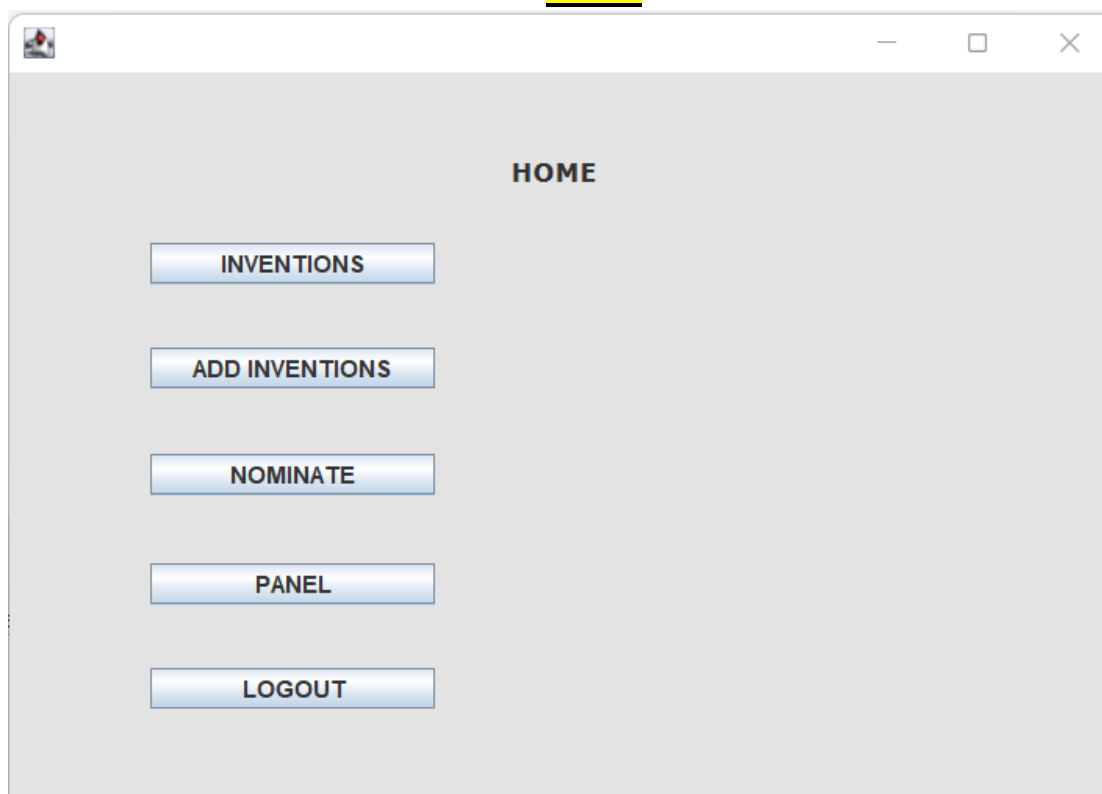

The image shows a 'Registration Form' window with the following fields and values:

- UserName:** User\_8
- License\_key(if Jury):** lk\_8
- PASSWORD:** ....
- CONFIRM PASSWORD:** .....

Below the fields are two buttons: **REGISTER** and **RESET**.

A 'Message' dialog box is displayed in the foreground, containing an information icon and the text: **password did not match**. An **OK** button is at the bottom of the message box.

**Home**

The image shows a 'HOME' window with the following layout:

- HOME** (centered at the top)
- INVENTIONS** (button)
- ADD INVENTIONS** (button)
- NOMINATE** (button)
- PANEL** (button)
- LOGOUT** (button)
